

3rd Conference Thorn 1988

The '88 Thorn conference originated from the idea that it would be nice for the EME group to meet each other. Geert **PA3CSG** anticipated a relatively small meeting with a very low budget, but the enthusiasm was so great that he had to move the conference location to a school to accommodate the interest. There was about 65 attendees and an extremely friendly atmosphere with a high *fun* level. The EME community on the average was **younger** then and many slept very little. On the technical side, DJ9BV demonstrated and discussed the errors involved in noise figure measurement. The NEC2 antenna simulation program was also introduced at the conference.
